

## **A&S Case Company... When Our Customers Ask, We Listen... Then Deliver Solutions.**

At last, a multiple guitar case designed to meet user's needs based on their thinking... made lighter, more compact and with revolutionary pocket doors for ease of use. It's 15% lighter, more convenient, incredibly flexible and stronger than any removable lid case on the market today.

### **When our customers told us:**

*"Industry guitar vaults are so bulky and cumbersome to work with. Can you develop a case that is easier to use while minimizing excess space, weight and overall size?"*

**We Listened & The A&S Axe Box™** was born, exclusively engineered with hands-on input from the professional guitar techs who've worked with top-touring acts for decades. Created with ease of use, flexibility and strength as it's main drivers, The A&S Axe Box™ has pocket doors that slide back into the body of the case - no heavy doors to remove, warp or lose. This feature alone reduces the weight of the case by 15% compared to a case with a removable lid or any other one on the market - that equates to a minimum of 40 pounds! Unlike any other system out there, this guitar holding system adjusts up and down offering maximum flexibility to accommodate guitars and basses of varying sizes. And that's not all, thanks to the innovative design of The A&S Axe Box™, many options can be incorporated including a guitar tuning station, a drop-down work surface, tuning racks, drawers, lights & electrical power without adding much space or weight.

**This is the Light-Weight Rock-Solid Solution that consumers have been asking for and the industry has been waiting for. As a leading manufacturer of custom ATA cases, we are the company that industries turn to for solutions.**

**When Our Customers Ask...  
We Listen, Then Deliver Solutions!**
